FREDERIQUE CONSTANT
GENEVE

FRÉDÉRIQUE CONSTANT

LIVE YOUR PASSION

Born from the passion that Aletta and Peter Stas have for refined watches, the brand Frederique Constant offers not only, year after year, exceptional timepieces of high quality, but also makes them accessible to watch lovers and connoisseurs alike.

GENEVA HERITAGE

As early as the early 18th century, Geneva was known as a major center for the creation and production of fine timepieces. Over the past 300 years, the Geneva watchmakers have risen to unparalleled heights in the art of horology.

Most of the world's famous watch manufacturers are based here in Geneva. The concentration of so many rare skills on the same location, the presence of the best suppliers and the exchange and sharing of information, allows independent companies such as Frederique Constant to remain at the forefront of precision watch-making - today and tomorrow. Our watch-makers are our most important assets, because each of our watches is individually assembled by hand.

PHILOSOPHY & BRAND VALUES

LET MORE PEOPLE ENJOY LUXURY

Our mission is not to restrict the interest in Frederique Constant watches to a limited and elitist circle of connoisseurs but rather to a broader selection of appreciative enthusiasts who want to enjoy Swiss high quality classical watches at sensible prices.

The mission of Frederique Constant is therefore, to apply the following three values to the development process of each of our models : Design, Quality and Innovation.

TODAY

The company has gradually become an important player within the watchmaking industry. Avid to always offer the best quality and at the same time remain affordable, we haven't stopped investing in our production equipment.

Besides surrounding ourselves with highly qualified watchmakers, we have developed all our departments to be able to control the various stages of the production of our watches, from initial conception to the final quality control, including assembly.

IN 2004

Frederique Constant entered the elite circle of Swiss watch brands that develop and produce their own in-house calibres. Consequently, Frederique Constant became a "Manufacture". In-house developed, in-house produced, in-house assembled.

10 YEARS OF HEART BEAT MANUFACTURE

BUILDING

Offering an attractive working environment of 3200 m² for more than 150 employees in the sectors of movement component production, calibre assembly, watch assembly, and an extensive quality control department.

For a virtual tour into our Manufacture, please visit :

www.frederiqueconstant.com/en/virtual-tour

DESIGN & CONCEPTION

The designer will translate the idea of a new model into a drawing and then build it, component by component, layer by layer, which in turn will go on to define the manufacturing process for this watch, before launching the prototype phase.

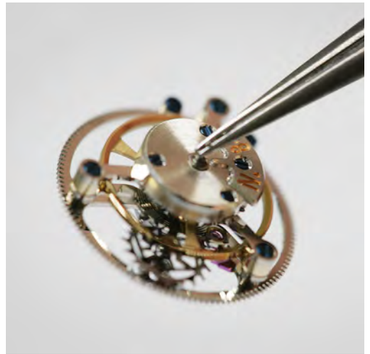
Frederique Constant uses cutting-edge computer software, principally computer aided design software, to assist in the watch design and development processes.

PROTOTYPE

Quiet, analytical and precise are the qualities needed for our engineers, who sometimes need to adjust the settings many times before the component is finally perfect.

DECORATION

Every visible component of each watch we produce is beautifully decorated. Every time the owners of a Frederique Constant watch look at their timepiece, they are bound to feel joy. Much of the intricate decorative work is done by hand, including detailed engravings, the application of the circular Côtes de Genève pattern, perlage and rhodiage, to name only a few.



WORKSHOP TI

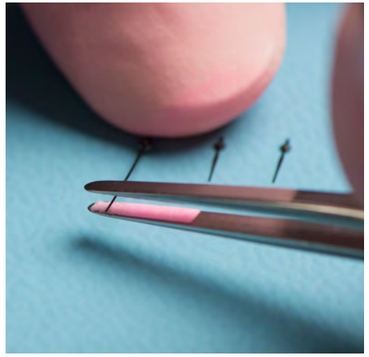
Commonly called T1 internally at Frederique Constant, the Manufacture workshop is a highly technical workshop, dedicated to the production of our in-house movements. Our Master-watchmaker and watchmakers undertake long and fastidious work, where patience, experience and know-how are required.

They handle delicate and fragile components, and have to be very precise with every gesture. Some Frederique Constant movements are made up from more than a hundred components.

Our watchmakers assemble, adjust, and control all our mechanical movements to make sure everything functions. Almost all assembly operations and settings are made by hand to ensure the highest quality of our Frederique Constant watches : jewelling, oiling, balancing the pendulum are just some of them.

WORKSHOP T2

The assembly workshop at Frederique Constant, or T2, is a workshop dedicated to all the operations necessary for the encasing of the watch. Our watchmakers carefully handle all the different parts that make up the watch : the movement, the case, the dial and the hands.



The cleanliness of this workshop is extremely important in order to prevent any foreign matter getting into the movements and constricting the smooth functioning of our watches.

Frederique Constant watches are all hand assembled.

WORKSHOP QUALITY CONTROL T3

All Frederique Constant watches, quartz as well as mechanical, pass a very extensive series of tests. Your watch will be tested for correct performance, a further step in which our controllers re-test all functions of your watch : jump the date, test time the setting, test winding (if your watch is mechanical) and so on. Mechanical watches with automatic windings undergo a further series of tests that will differ depending on the complexity of the movement : running and amplitude tests, and testing of the power reserve.

But if one of these tests does not meet our high quality standards, the watch will return to the production cycle until it, too, is perfect.

AFTER SALES SERVICE

All Frederique Constant watches are warranted for two years, parts and labor, for normal use of your watch.The Frederique Constant movements, either quartz or mechanical, need to be revised more or less regularly, according to their complexity. Therefore they return to our After Sales Service workshop and pass through the hands of our highly skilled watchmakers, who will verify that your watch works correctly and will check the «mechanics» of your movement.

Only your Tourbillon Manufacture Silicium does not go through this department. In fact, it comes back to the hands of the watchmaker's Manufacture workshop which assembled, adjusted, and encased it. At Frederique Constant, we insist that our watchmakers take care of our exceptional timepieces throughout its life. Once again, your watch will undergo all tests in Quality Control before being returned to you.

HERE AT FREDERIQUE CONSTANT WE HAVE A PASSION FOR CREATING BEAUTIFUL, HIGH QUALITY WATCHES WITH IMPECCABLE FINISH. EACH AND EVERY DETAIL OF EACH AND EVERY TIMEPIECE, WHETHER TECHNICAL OR AESTHETIC, IS EQUALLY IMPORTANT.

A PASSION FOR DETAILS

Right from the conception of a new model, we take the utmost care over even the smallest details and parts that make up your watch, to guarantee your complete satisfaction, in regards to both the design as well as the comfort on your wrist.

Beautiful, comfortable, hand-polished cases, refined and decorated dials with various guilloché in the centre and hand-applied indexes are some of the details we pay attention to for your pleasure.

Our movements are also treated with just as much care and attention. Through the transparent glass on the case back you are able to admire the ‘Côtes de Genève’ decorations that adorn our plates and oscillating weights, where some of the bridges have been carefully pearled. The movement components have, for the most part, been deliberately angled in order to break and polish the bevelled edges for an even more refined aesthetic.

THE WATCH STRAPS, WHETHER IN LEATHER OR IN METAL, ARE SYSTEMATICALLY DESIGNED FOR COMFORT WHILE BEING WORN. FINALLY, OUR BUCKLES ARE FINELY DECORATED WITH THE FREDERIQUE CONSTANT CREST PRESENT ON EVERY ONE.

10
YEARS OF
HEART BEAT
MANUFACTURE

In 2014, Frederique Constant celebrated its 10th anniversary of its in-house handcrafted movements. Since 2004, Frederique Constant is delivering timepieces with manufacture movements that are in-house developed, in-house manufactured and in-house assembled.

HEART BEAT CALIBRE SERIES

« IN 2004, THE MANUAL VERSION OF THE HEART BEAT MANUFACTURE WAS INTRODUCED WITH MAJOR SUCCESS. THE FIRST FREDERIQUE CONSTANT IN-HOUSE CALIBRE WAS BORN. »

1994
FC-310M36
First Heart Beat

IN 1994, FREDERIQUE CONSTANT DEVELOPED ITS FIRST HEART BEAT WATCH. THE PURPOSE OF THE HEART BEAT DEVELOPMENT WAS TO SHOW THAT THESE FREDERIQUE CONSTANT WATCHES WERE MECHANICAL.

Heart Beat watches have an aperture at the position of the balance wheel to show that the movement of the watch is mechanical.

THE FORGOTTEN REGISTRATION

At that time, Frederique Constant as a company was growing fast but still relatively small. Without an internal legal department and insufficient management attention, a big mistake was made. The Heart Beat feature should have been deposited as a design registration. Possibly a patent could have been secured. Instead, without any registration, first Frederique Constant Heart Beat watches were introduced in the market. It only took one year before the first Heart Beat copies started to appear. Some competitors plainly copied the Heart Beat opening in their watches. Some other competitors changed the shape of the Heart Beat opening but inherently still copied the Heart Beat feature.

HEART BEAT COMPLICATIONS

With copy Heart Beat watches in the market, it was too late to still register the Heart Beat feature. To reinforce Frederique Constant as the creator of the original Heart Beat, a strategy was developed to introduce every few years new Heart Beat calibres with Complications. In 1998, we introduced the Heart Beat Day-Date, a calibre development in co-operation with Dubois-Depraz. In 1999, we followed with the Heart Beat Perpetual, also a development in co-operation with Dubois Depraz. Finally in 2001, we introduced the Heart Beat Retrograde, a calibre co-operation with Agenhor of Geneve.

START DEVELOPMENT HEART BEAT MANUFACTURE

Internal discussions on the development of new Heart Beat Complications focused often on design issues with the original Heart Beat watches. As these Heart Beat watches were all made based on existing calibre ebauches, we were bound by the basic design of these calibres.

One of the issues was that the balance wheel was very deep inside the Heart Beat opening. It would be a major improvement if we could bring the Balance Wheel more to the front side of the calibre, making it more visible. Another issue was that the Spiral, the most important component of a mechanical watch, was on the backside of the calibre. After many discussions, we finally concluded to develop our own calibre and solve these issues once and for all. In 2001, we started the development of the Heart Beat Manufacture with characteristic bridge for the Balance Wheel on the front side of the calibre. Having the bridge for the Balance Wheel on front side of the calibre enabled to have the Spiral and Fine Regulation on the front side as well, creating a much more appealing Heart Beat design. This construction was completely new and enabled Frederique Constant to apply for a patent. This time, also all designs were properly registered before market introduction.

CONTINUING HEART BEAT DEVELOPMENTS

Developing and producing the first Heart Beat Manufacture took over three years. It was a major development in co-operation with the the École d'Horlogerie de Genève, École d'Ingenieurs de Genève and the Horloge Vakschool Zadkine. In 2004, the manual version of the Heart Beat Manufacture was introduced with major success. The first Frederique Constant in-house calibre was born.

FOLLOWING THE SUCCESS OF THE LAUNCH OF THE FIRST HEART BEAT MANUFACTURE CALIBRE IN 2004, FREDERIQUE CONSTANT HAS PRESENTED ALMOST EVERY YEAR AN ADDITIONAL VERSION TO ITS HEART BEAT MANUFACTURE RANGE. SOME FEATURES REMAINED CONSTANT, SUCH AS THE SIGNATURE APERTURE, PERFECTLY CENTRED AT THE 6 O'CLOCK POSITION. EACH YEAR, HOWEVER, NEW DESIGN FEATURES HAVE BEEN ADDED; THE HEART BEAT IS CONSTANTLY BEING REVISED, UPDATED AND TECHNICALLY ADVANCED...

2016 INTRODUCTIONS

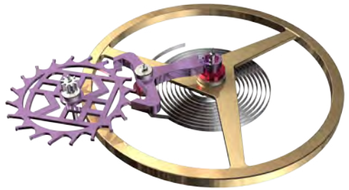
The FC-941 Automatic Heart Beat Manufacture caliber with date and Silicium escapement, improved in terms of reliability, durability and pure technical excellence.

In the past years, the R&D Department at Frederique Constant has been designing, developing and improving constantly the Heart Beat Manufacture calibres.

BUILDING TECHNICAL PERFECTION INTO A BEAUTIFUL BODY

The Heart Beat Manufacture watches with the Silicium escapement are part of the Frederique Constant Manufacture Collection. The Heart Beat Manufacture Silicium features the recognizable popular patented balance wheel bridge on the front side of the calibre.

The Silicium escapement wheel can clearly be seen through the Heart Beat aperture in the dial, working tirelessly and at the same time creating an eye catching effect. All Heart Beat Manufacture Silicium calibres feature a transparent case back to admire the beauty of the movement, which is another feature certain to please.



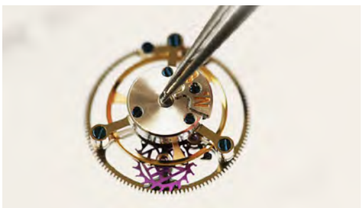
FC-980
TOURBILLON
MANUFACTURE SILICIUM

THE TOURBILLON MANUFACTURE SILICIUM FEATURES A SILICIUM ESCAPEMENT (WHEEL AND ANCHOR) THAT USES LESS POWER AND MAINTAINS AMPLITUDE MORE EFFICIENTLY THAN A STANDARD LEVER ESCAPEMENT, BECAUSE IT FUNCTIONS WITHOUT LUBRICATION.

The Frederique Constant Tourbillon consists of a mobile cage, driven by the gear train, carrying the balance wheel and escapement. Every time the balance wheel receives an impulse, the cage rotates slightly with all the elements it contains. The cage turns co-axially and makes one revolution per minute, so that the error of rate will automatically be compensated while the Tourbillon cage travels through the opposite position.

SMART WEIGHT BALANCING

The Frederique Constant Tourbillon Cage consists of 80 parts. Each of these parts is produced to the highest possible tolerance, with a precision of 1-2 micron (0.001- 0.002 mm). Many of the parts are produced on Frederique Constant's ultra precise CNC machine in Plan-les-Ouates. For a Tourbillon to run accurately, an equal distribution of weight is essential. Frederique Constant solved this problem



by a "Smart Weight Balancing" structed with a slight over-weight opposite the Smart Weight Balancing system on the main Cage Wheel. Thereafter, a highly skilled watchmaker is able to balance the weight into the center of the Tourbillon cage by adding or exchanging tiny metal rings under the two screws on the main cage wheel. Typically, 8 hours are required for a watchmaker to adjust the tiny rings and balance the weight perfectly for the entire Tourbillon cage.

FC-700 CALIBRE SERIES

ALL FUNCTIONS ADJUSTABLE BY THE CROWN ONLY

The Frederique Constant FC-700 calibre series, originally developed and launched in our 2009 Maxime Manufacture Collection, is proof that wonderful technological advances can be made which are still incredibly easy to use. Over the past five years, our designers, engineers, technical team and dedicated watchmakers have all worked together to develop the FC-700 calibre series. Today, what started as a relatively basic calibre has evolved to the point that the full range of features and complications of any timepiece using an FC-700-series calibre can be quite simply accessed through t he watch's single crown.

This development represents a major breakthrough in the manufacture of luxury Swiss watches, and the FC-700 calibre, which took years to design and develop, will now act as the springboard for future advances in Frederique Constant timepieces.

MANUFACTURE
COLLECTION

HANDCRAFTED IN-HOUSE MOVEMENTS
Fully conceived, developed, produced, assembled, adjusted and encased in our workshops in Plan-les-Ouates, Switzerland, the manufacturing process of the Manufacture Collection timepieces requires extensive work, and is done – mostly by hand- for the pure pleasure of the connoisseurs of high quality watchmaking.

With a team of highly skilled watchmaking specialists, the brand started this development back in 2001. Now, more than thirteen years later, Frederique Constant is able to manufacture twenty five different in-house calibres within its Workshops.

Manufactured in a limited edition for most of the models, the Frederique Constant Manufacture Collection is the best technologically advanced set of watches we are manufacturing.

Beautifully engraved dials with delicate guilloché decorations, sleek, elegant cases are certain to attract admiring glances. Alligator or crococalf leather straps, crystal see-through case backs, intricate engravings and carefully selected raw materials, from gleaming stainless steel to lustrous rose gold, all contribute to the “wow factor” which this range has in abundance.

With the Manufacture collection, we are extremely proud to present all our technical know-how.

LADIES AUTOMATIC
COLLECTION

The Frederique Constant Ladies Automatic Collection has been designed by women for women. Classic and elegant, feminine and sophisticated, sexy in every detail, these fine mechanical timepieces have been developed with passion to reflect the values and aspirations of today's women.

Since 2004, Frederique Constant has engaged in supporting causes, with $50 donated for each watch sold from the Ladies Collection to various charities. These charities include those related to the heart, children and women. Frederique Constant's slogan is "Live your passion", and the brand does. Passion definitely shows through its craftsmanship, as well as its engagement toward charity causes.

We invite you to discover all Charity causes supported by our Brand on foundation.frederiqueconstant.com

Frederique Constant choose Oscar®-winning actress and philanthropist Gwyneth Paltrow as its new global Charity Brand Ambassador watch brand. Our new Charity advertising campaign is supporting the educational projects of the "DonorsChoose" organization, involved in supporting education for children.

Frederique Constant hopes to make a difference in the lives of many, by soliciting the support of people who have shown warm affection for our brand, and extending that same affection to the charities and causes with which we are associated.

GWYNETH PALTROW
SUPPORTS DONORSCHOOSE

ABOUT DONORSCHOOSE

Founded in 2000, DonorsChoose.org makes it easy for anyone to help a classroom in need. Teachers at 70% of all the public schools in America have created project requests, and more than 2 million people have donated $398 million to projects that inspire them. Over 17,000,000 students — most from low-income communities, and many in disaster-stricken areas — have received books, art supplies, field trips, technology, and other resources that they need to learn.

Visit www.donorschoose.org/intro to hear Oprah Winfrey and Stephen Colbert tell the DonorsChoose.org story.

ABOUT GWYNETH PALTROW

Oscar®-winning actress Gwyneth Paltrow is one of the Hollywood's most philanthropic women, making a significant difference in her chosen causes every day. With her incredible philanthropic work and her personal commitment to fostering change, Gwyneth Paltrow becomes the new global Charity Ambassadress of Frederique Constant, directly supporting the educational projects of the "DonorsChoose" organization, involved in supporting education for children. The brand new Charity advertising campaign, shot by famous Tom Munro, directing Gwyneth Paltrow in a positive and joyful expression, promoting and inviting people to support the DonorsChoose.

Gwyneth's natural and classical beauty, inspirational involvement in Charity and undisputable charisma make her the perfect match for our independent and family-owned Swiss watch brand.

RUNABOUT
COLLECTION

Since 2009, Frederique Constant celebrates the legendary Runabout yachts of the roaring 20's by offering an attractive series of limited edition timepieces named "Runabout". Runabout boats were designed by skilled engineers who endeavored to create a timeless design – highly polished wood, gleaming chrome and glistening glass – that would never go out of fashion. They succeeded. Today, these stunningly elegant crafts still grace the world's finest waterways, and many of them have been seen at events hosted by Frederique Constant.

THE RIVA HISTORICAL SOCIETY

Guardians of a wonderful legacy. In 1998, the Riva Historical Society was founded in Milan, Italy. The primary objective of the RHS is to locate and aid in the conservation of classic runabout boats that were designed by the passionate boating enthusiast, Mr Carlo Riva. Frederique Constant has joined forces with the Riva Historical Society ; together, they salute the crafts that epitomized the sophistication and easy elegance of that wondrous time when the world seemed happy and relaxed.

VINTAGE RALLY
COLLECTION

Frederique Constant has long been associated with numerous vintage car rallies all over the planet, often as the official timekeeper. We have been closely associated with events from China to France with the Peking to Paris Rally, but also to America, Canada and Mexico with the Carrera Panamericana. The company has a long association with Healey cars.

This collection shares a number of features with the cars to which they pay homage. With each model presented in a strictly limited edition, these watches are undoubtedly going to go as fast as the sleek and elegant cars which inspired their sleek, timeless designs. Pure style for pure passion !

In 2016, Frederique Constant further strengthens its ties to motor sports by identifying itself with the legendary Peking to Paris Motor Challenge and becoming once again its official timekeeper.

HOROLOGICAL SMARTWATCH
COLLECTION

The Swiss Horological Smartwatch, a beautiful Swiss timepiece with connected and smart functionality. A quality watch created from fine materials and made by hand. Our Horological Smartwatch combines the DNA of a classic Swiss watch with the best of Silicon Valley technology. Frederique Constant Swiss Horological Smartwatch is now connected and smart with more than 2 year battery life.

HOROLOGICAL

There is no digital screen on Frederique Constant Swiss Horological Smartwatches. Instead, the beautiful laser cut hands on the watch dial display information in analog form. These Horological Smartwatches retain their natural classic beauty and can deliver the benefits of the quantified self, all without ever having to recharge a battery.

LIVE LIFE

The health benefits of being more active and getting better sleep are well understood. Activity monitoring and sleep tracking are the most successful wearable application of today, used by over 20 million people. Frederique Constant is now combining a beautiful Swiss watch with the advanced technology platform. The sensor-fusion engine tracks activity and sleep patterns with high accuracy.

Activity and sleep information is presented in real-time on the Swiss Horological Smartwatch using beautiful traditional analog dials. The Swiss Horological Smartwatch synchronizes automatically with applications on Apple and Android smartphones. On the iOS and Android apps, simple and easy-to-understand graphics highlight how much one has moved and slept during the day, week, or month. This data will assist users to better understanding themselves, and along with appropriate goal setting and intelligent coaching, will improve their well being. Better sleep and a more active lifestyle are widely recognized as simple, but effective, positive behavioral changes. The Swiss Horological Smartwatch now combines the features and functionality of the technology platform with a luxury timepiece.

ACTIVITY TRACKING

Keep track of daily steps, calories burned,and total distance.

WORLDTIMER FUNCTION

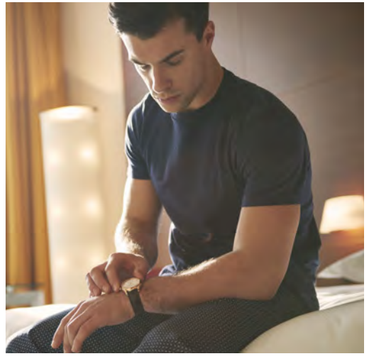
Check the current time in world cities in each of the 24 time zones.

ALWAYS ON-TIME & DATE

You never have to set a time and date - traveling across time zones, the Frédérique Constant Horological Smartwatch picks up the time from your smartphone and displays new time automatically.

SLEEP MONITORING

Wear your watch at night or put it under your pillow to record your sleep. Sleep monitoring provides details on how much time you spent in deep sleep, light sleep, or awake.

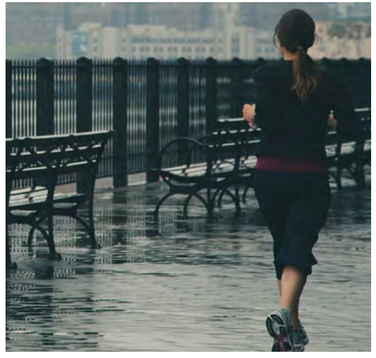


GET ACTIVE ALERTS

Set an alert to remind you to move if you've been idle for a set amount of time. Customize your Get Active Alert from the MMT-365 app.

SMART SLEEP ALARMS

Set a smart sleep alarm that will help you Wake Up At the best time in your sleep cycle so that you wake up refreshed.



DYNAMIC COACHING

Get suggestions, tips, and information catered specifically to you based on your activity and sleep goals

CLOUD BACKUP & RESTORE

Recover all of your data, even if you lose your watch or phone. With its unique recording system, the Horological Smartwatch independently stores your activity and sleep for 30 days without having to synchronise it to your smart-phone. A great way to collect and keep your data on-the-go! Recover all of your data, even if you lose your watch or phone. With its unique recording system, the Horological Smartwatch independently stores your activity and sleep for 30 days without having to synchronise it to your smartphone. A great way to collect and keep your data on-the-go!

CLASSICS FC-285 WITH 2+ YEARS BATTERY LIFE

SLIMLINE
COLLECTION

The Slimline Collection is a series of ultra-flat models. The fine quartz movements upon which this elegant series of watches is based have a thickness of just 1.90 mm. Dials are finished with a delicate guilloché pattern produced by a complex engraving procedure. Precision tooling, with tolerances as low as 1/1000 of a millimeter, have been developed for each pattern and dial design.

Elegance of the shape, timelessness of the style, harmony of the curves, everything contributes to make of these timepieces for clean lines, a classic in a modern interpretation. Thin and chic at each and every level.

CLASSICS
COLLECTION

Frederique Constant is known for its classical and refined timepieces of exceptional value. Clean lines and a classic appearance are the hallmarks of every watch within the Classics Collection. Other attributes that never go out of fashion include reliability and durability. Every timepiece within the Classics Collection has been engineered to the most exacting standards.

Producing precision timepieces like those made at Frederique Constant requires exceptional skill and, of course, the finest materials and most advanced techniques. Our company is determined to maintain the highest possible production standards in every watch that bears the Frederique Constant name.

Frederique Constant's philosophy of providing luxury watches at affordable prices holds true across the range.
